Ricardo Ribeiro

Bahia, Brazil • +5571996820764 •rickribeiro99@gmail.com • linkedin.com/in/rickrribeiro

Summary

Experienced software developer with a degree in Computer Science and MBA in Software Engineering. Specializing in FullStack Development and AI Engineering with over 6 years of hands-on experience mostly in microservices with Node.js, Typescript, AWS, Django and Python.
Experience in diverse project scopes including police intelligence system, CMS, HR systems and product subscription management. Recognized for creativity, resilience, motivation and effective collaboration.
I've lived in multiple countries, which has strengthened my adaptability and cross-cultural communication.

PROFESSIONAL EXPERIENCE

Wave Group, Remote — Mar 2026 – Now
Senior FullStack Software Engineer

- Optimized application workflows performance by 50% up to >99% through caching, implementing BullMQ job deduplication, and designing background workers for CPU-bound bottlenecks.
- Owned the design, deployment, and maintenance of the company's cloud-native infrastructure leveraging Kubernetes, Docker, Ansible, PostgreSQL, Redis, RabbitMQ, MinIO, Prometheus, Grafana, and Loki.
- Led Platform Engineering initiatives by establishing repository standards, CI/CD pipelines with GitHub Actions, shared Claude Code RAG knowledge base, reusable LLM skills/agents, automated testing, and security hardening.
- Collaborated with an external Software Architecture Consultant to define the new platform architecture and contributed to the migration from microservices to a modular monolith React/NestJS architecture.
- Developed key product features across the NestJS backend and React frontend, including Meta campaign automation workflows, a VSL Builder, and AI Agents for generating UI components.

Murilo Vilaverde, Remote — Apr 2026 – Sep 2026
Software Consultant

- Reduced monthly AI infrastructure costs by over 90% by redesigning the AI architecture with a Retrieval-Augmented Generation (RAG) pipeline using a vector database. Improved response quality, eliminated knowledge base size limitations, and significantly reduced response latency.
- Resolved critical security and reliability issues introduced by the previous AI-generated codebase, including unauthorized access to admin pages, exposure of sensitive data, Service Worker caching issues, and data inconsistencies caused by multiple sources of truth.
- Led a large-scale codebase refactoring by modularizing the application, extracting reusable components, applying design patterns, and replacing hardcoded values with a fully admin-configurable system, significantly improving maintainability and eliminating developer dependency for configuration changes.
- Implemented comprehensive application monitoring and observability, enabling detailed error tracking, faster root cause analysis, and improved production reliability.

Mindsight, Remote — May 2024 – Feb 2026
FullStack Software Engineer

- Designed and delivered new features, refactored legacy services and improved system stability for multi-tenant HR platforms serving tens of thousands of monthly users.
- Refactored critical processing flows, reducing memory consumption and execution time by over 50%, directly improving system stability and scalability.

- Led the development and implementation of authentication and system communication features, including SSO login using external IDPs, OAuth2 authentication for internal systems communication and event journaling, supporting compliance.
- Created a job board application end-to-end (Django + React) in a team of 2 developers, having a key role in architecture decisions, data modeling, API design, development, test and deployment.
- Main skills: Django, React, Python, Typescript, Docker

Agile Content, Remote Mar 2022 – May 2024

Backend Software Engineer

- Took a key role in definitions of architecture and project patterns, developed and maintained microservices (NodeJs APIs and Serverless functions) in a subscription management platform for the biggest telecom company in Argentina handling high-volume transactions in critical services, like purchase, billing, renew and cancellation services.
- Architected and evolved AWS based solutions using services eg. AWS lambda, SQS, Cloudwatch, ECS, Xray, parameter store, S3, Redshift, RDS..., supporting millions of events per month with high availability and observability.
- Contributed to architectural decisions and service design patterns, improving system reliability and reducing incident frequency.
- Creation/maintenance of application infrastructure: docker, Terraform, serverless framework, CI/CD...
- Creation of datasets and reports with Tableau and Quicksight
- Led the development of internal libraries for API testing using python Robot framework and achieved 100% unit test coverage, significantly improving deployment confidence.
- Main skills: Node.js, Amazon Web Services (AWS), CI/CD, Serverless Computing, Testing (unit, integration, Api/Smoke), Jira, serverless, Grafana, scrum, TypeScript, c#, docker, Robot Framework, python

IPQ Tecnologia, Salvador-BA, Brazil Feb 2021– Mar 2022

Full Stack Software Developer

- Developed and scaled a public security and police intelligence platform used by government agencies, contributing to a reported crime reduction of over 30%.
- Architected and implemented high-throughput integrations processing more than 2 million messages per day using Kafka, enabling real-time data exchange between critical systems.
- Built layers for maps, integration between systems and confidential core operational modules for a critical environment with strict reliability and confidentiality requirements.
- Worked on tasks for a CMS for registering electronic components, monitoring and equipment map
- Skills: Node.js, Javascript, Redis, Kafka, Django, python, MySQL, HTML, EJS, Docker

Senai Cimatec, Salvador-BA, Brazil Feb 2018 – Aug 2019

Full Stack Software Developer Intern (Aug 2018 – Aug 2019)

- Collaborated on the development of a system for monitoring, automation and management of greenhouse sensors
- Owned the architecture definition and development, with supervision, an API for vehicle fleet management and reservations, optimizing logistics and resource allocation for enhanced operational productivity
- Collaborated in the development of a traceability system to wind tower manufacturing, revolutionizing part management, report and assembly processes; the software enabled seamless tracking of parts, leading a big increase in production output
- Skills: C#, Asp.net, Node.js, Html, DDD, Firebase, SQL Server, JavaScript, WebSockets

Augmented Reality Volunteer Intern (Feb 2018 – Aug 2018)

- Simple features and bug fixes in a mixed reality application for Microsoft Hololens glasses.
- Creation of an i18n library for the application.
- main skills: Unit 3D, C#, Microsoft hololens, Vuforia framework, augmented reality

EDUCATION

UNIPDS Feb 2026 – Apr 2026

Applied AI Engineering postgraduation

Vanderbilt University Jan 2026 – Mar 2026
AI Agent development specialization and AI Software Engineering specialization

USP - São Paulo University Nov 2023 – Jul 2025
Master of Business Administration (MBA) in Software Engineering - (QS top 100 university)

Universidade Salvador, Salvador-BA, Brazil Aug 2021 – Dec 2022
Bachelor's degree in Computer Science

Senai Cimatec, Salvador-BA, Brazil Feb 2017 – Aug 2021
Bachelor's degree in Computer Engineering (transferred to Computer Science). Competitive Programming group coordinator(coached +15 students and organized competitions); AR research group;

SKILLS

Stronger Programming Languages: Javascript(Advanced), Python(Advanced), Typescript(Advanced), C# (intermediate), C/C++(Basic)
Web Technologies: Node,js, Django, React, Asp.net, JsonSchema, Restful APIs
Databases & Cloud: AWS(Amazon web services), MySQL, Redis, Postgres, redshift, firebase
Tools & Platforms: Git, Docker, Linux, Kafka, Rabbitmq, Grafana, Quicksight/tableau, Travis CI/CD, kubernetes, Scrum and Agile methodologies, Serverless Computing, Testing (Unit/api/integration/mutant), terraform, ansible

Languages

Portuguese (Native)
English (Advanced/Fluent)
Spanish (Advanced/Fluent)
Chinese (Basic)
Japanese (Basic-studying)
